

a web3 health management system

Based on wearable devices, privacy computing
and Web3 ananda(do something that makes you happy) to earn

ADVAITA

a web3 health management system

Explore apps for a healthy, happy, happy and harmonious lifestyle with wearables combined with active health games. Built-in Machine-Fi, Health-Fi, Data-Fi and DeHi (Decentralized Health Insurance).

Users wear wearable devices to continuously collect human body data, obtain long-term human body metabolism data, and use the artificial intelligence system to evaluate people's emotional state and early warning of diseases. The system provides active healthy exercise and intervention programs.

By executing the plan and contributing data, users can get rewards while harvesting health.

Through the continuous optimization of the active health plan, the establishment of an active health artificial intelligence medicine and decentralized insurance (DeHi) system that is different from passive medical care, so that the early detection of diseases is less likely to occur, thereby reducing medical insurance costs.

60% of diseases are caused by physical and mental disharmony, and contemporary medicine has no complete solution

60% of diseases are caused by physical and mental disharmony, and contemporary medicine does not have a complete solution. WHO statistics show that medical care accounts for only 8% of the factors affecting human health, and lifestyle accounts for 60%. The sub-health population accounts for 75%, the truly healthy population is 5%, and the sick population is 20%. Human health refers to the overall health of physical, psychological and social adaptation, and modern disease medicine cannot fully reflect the state of human health.

The absence of holistic health medicine

Humans are divided into five dimensions: body, energy, mind, mind-oriented spirituality, and spirituality. However, the current medical system focuses more on the physical level, and medicine in the other four dimensions is lacking. At present, there is only disease medicine, and there is no health medicine system for lifestyle. The current medical system is a passive medical system and lacks active health medicine for sub-health. The insurance system is an insurance system for diseases, and there is no insurance system for sub-health.

Active Health Service

System

Pulse diagnosis can comprehensively reflect the state of overall health, physical, psychological and social adaptation. But TCM practitioners can only know what they can understand. Wearable devices can collect human biomedical data, but cannot give a direct relationship with health.

Data collection

Collection objects: pulse wave and body temperature, respiration, temperature and humidity and skin resistance

Collection time: long-term continuous data collection

Algorithm 1:

GCYY

Quantitatively integrate continuous heart rate, blood pressure (high pressure, low pressure), heart rate variability, and pulse wave data to provide a comprehensive index, which not only represents the comprehensive cardiovascular regulation ability and state of mind.

mental health

● heart ● low ● high

Algorithm 2: Easy-flow parameter hole

Collect multiple parameter points of a pulse wave, analyze the linkage of multiple pulse wave data, and associate parameters that are not linked with symptoms.

1. Mood assessment
2. Disease and sub-health biomarkers

Active Health Apps

completed application

No disease assessment

Professor Zhang Qiming, Medical Experiment Center,
Chinese Academy of Chinese Medical Sciences

2.8 million TCM reports for 24 consecutive hours

2.8 million data

no disease assessment

China Academy of Chinese Medical Sciences

Homeostasis

Analysis and early warning of unstable parameters
for 5 consecutive days of disease-free evaluation
reports.

Active Health

Insurance

Provide hypertension insurance
through artificial intelligence early
warning and intervention system.

Visio

Establish a service platform for active health assessment, intervention and insurance in the web3 world to solve the increasing physical and mental health problems and reduce medical and insurance costs.
